NAME INDEX

Abelson, R., 88, 125
Ahn, H., 38, 51
Ajzen, I., 45, 53
Akerlof, G., 29n, 51
Alessie, R., 29n, 33n, 40, 51
Allison, P. D., 218, 223, 232, 239, 242, 248, 256, 271, 276, 283, 316
Altham, P. M. E., 62, 73
Alwin, D., 242
Amemiya, T., 247, 252n, 253, 254n, 276
Anderson, C. J., 177, 178, 202, 213
Anderson, K., 277
Armer, J., 31n, 55
Arnheim, R., 128, 144
Ashenfelter, O., 28, 52
Atkin, R., 130, 144
Axinn, W., 258, 260, 277

Babu, D., 243
Bank, B., 33n, 52
Barbut, M., 132, 144
Barnhart, J., 28, 52
Bassett, G., 14, 54
Bassi, L., 28, 52
Batchelder, W. H., 79, 125
Beach, L., 49, 52
Becker, M. P., 178, 201, 202, 213
Ben-Akiva, M., 252n, 276
Bennett, N. G., 316
Bentler, P. M., 156, 173
Berge, C., 130, 144
Berk, R. A. A., 71, 73
Bernard, H. R., 179, 190, 210, 213
Biddle, B. J., 33n, 52
Bielby, W. T., 162, 174
Birkhoff, G., 131, 144
Bishop, T. S., 161, 173
Blalock, H. M., 41, 52
Blank, G., 76, 122
Bliesner, J., 134n
Bloom, D. B., 316
Bloom, D. E., 295, 316, 317
Blossfeld, H., 281, 316
Blumstein, A., 2, 52
Bobrow, D. G., 78, 122
Böckenholt, I., 178, 194, 213
Böckenholt, U., 178, 194, 213
Bollen, K. A., 71, 73, 147, 148, 149n, 150, 152, 159, 160n, 162, 167, 173
Borjas, G., 40, 52
Boruch, R., 52
Bott, E., 128, 144
Brachman, R. J., 78, 122
Brass, W., 310n, 316
Breiger, R., 128, 129, 144
Brendt, E., 276
Brent, E., 76, 122
Browne, M. W., 148, 149, 149n, 160, 173
Bruce, B., 88, 122
Bryk, A. S., 67, 73
Bullard, C. G., 89, 123
Bumpass, L., 265, 276
Burt, R. S., 180, 181–182, 197, 200, 213

Camburn, D., 242, 276
Campbell, A., 73
Campbell, E., 52
Campbell, K. E., 180, 181, 184, 215
Carley, K. M., 78, 79, 80, 81, 86, 87, 88, 89, 91, 92, 93n, 94, 95, 96, 97, 97n, 98, 98n, 100, 105, 113, 114, 117, 122, 123
Carroll, D. C., 210, 213
Case, A., 29n, 37, 40, 52
Cherlin, A., 276
Cicourel, A. V., 79, 81, 87, 92, 94, 95, 97, 98n, 122
Clelland, D. A., 167, 174
Cliff, A. D., 37, 52
Clogg, C. C., 1n, 3, 52, 62, 72, 73, 74, 177, 178, 179, 201, 202, 203, 205, 206, 208, 209, 210, 213
Coale, A. J., 310n, 316
Cohen, J., 2, 52
Coleman, J. S., 31n, 32, 52, 283, 316
Collins, A., 78, 122
Conlisk, J., 29n, 52
Conrad, P., 122
Costner, H. L., 148, 173
Cox, D. R., 218, 220, 222, 234, 235, 241, 242, 280, 281, 282, 292, 311, 316
Coyle, S., 28, 52
Craig, P. A., 316
Crane, J., 31n, 32, 52
Crossing, E. E. M., 89, 123

SUBJECT INDEX

absolute risk, 283, 299–303, 309
acquaintanceship, 181–2
actors, social. *See* social actors
additive functions, 181
additive hazard rate models
  linear-additivity test, 283, 291–4
  marriage timing and employment effects study, 299–303
adjacency matrices, 128
African infant precocity, 221
age effects, monotonic transformation of, 299, 301, 307
algebra, population level, 59–60, 61
algebraic data reductions, 143
algebraic substitution vanishing tetrads, 157
analog estimation principle, 59, 60, 61, 63
analytic concordances, 109
Annual Report of the Superintendent of the Insurance Department, 227
archival sources of event start times, 227
artificial intelligence, 88, 109
ASKSAM procedure, 109
ASSOC program, 206
association models (ordinal relations)
  compared to correlation models, 208–10
  description of, 178–80, 201–6
  fitting, 209–10
  restricted, 203–8
assumptions
  evaluating, 71, 72
  plausibility of, 2
asymptotic behavior of estimators, 38
asymptotic covariance matrix, 160–1
asymptotic tests, 159
  distribution-free, 147, 149, 161
asymptotic variance of tetrad differences, 160, 161
asymptotically independent time- specific parameters, 283
attitudes, effects of, 67–70
autoregressive latent variable model, 170

baseline time effects, 283, 310–11
Bayesian estimation, 6n, 19, 60, 61, 62
behavior. *See also* endogenous social effects
  attitudes and, 68
  intentions data to predict, 45–50
  objective and subjective determinants of, 43–5
  predicting, 68–70
Bernoulli trial, 239
bias in parameter estimates, event-history analysis, 223, 247–8
bias of data, methodological, 81
BIC statistic, 306, 308
binary data structures, 143
binary logit programs, software for, 234, 266–70

binary response models of social effects, 39–40
bipartite graphs, 129–30
bivariate ordered probit model, 247
Bonferroni correction, 159
Boolean lattices, 142
business complexes, 144
buying intentions, 45

CALIS program, 156
CANON program, 194, 197
canonical correlation analysis, 178, 187–9, 193, 211–13
  restricted, 194–7
categorical covariates, 280, 283–8, 310
categorical time variable, 280, 283–8
causal inference, 71
CDAS program, 206
cell-average estimate, 6
censored data, 10, 63, 258
censored distribution, 19–20
censored probability, 11
cluster analysis of texts, 90
CMATRIX program, 118–19
CODEMAP program, 98n, 103n, 120–1
coding choices in text analysis, 75–126
  analysis level, 81–7, 94–7
  automated coding, 83, 96, 97, 115–16
  concept types, 93–4
  errors in coding, 88, 116
  existence or frequency of concepts, 86
  generalization level, 83–5
  implication level, 85–6, 88–9, 97, 100
  irrelevant information, 82
  number of concepts, 86–7
  predefined or interactive concept choice, 83
  for relationships, 113
  simple semantic method, 98–100
  simple vs. complex, 115
  social knowledge, 97–102, 114
  translation rules for, 85, 88–9
colored graphs, 113
columns. *See* rows and columns
community integration, 181
competing hazards models, 23
  discrete-time. *See* discrete-time competing hazards model
complementary log-log models, saturated hazard rate, 288, 290, 295–303, 303, 306
complementary log models, saturated hazard rate, 288, 290–1, 295–303, 303, 306, 308, 309
complete rank order response format, 182–4
complex structural models, 58
COMPRA program, 103n, 121
computational hermeneutics, 76
computer network, study of interaction in, 179, 198–201, 210–16
computer programs. *See also* names of specific programs
  for association models, 210
  for binary data, 234
  for coding texts, 115–22
  for corresponding analysis, 210
  for drawing lattices, 133n
  for event-history analysis, 231–4, 241
  maximum likelihood, 247
  multivariate rate models, 282
  search algorithm, 148
  standard statistical packages, 235
concepts (text analysis), 79, 82
  co-occurrence of, 84
  complex, 84
  definition, 92
  deleting, 82–3
  embedded, 82
  extracting, 89
  frequency of, 86, 109
  implication level for, 85–6, 88–9, 97, 98, 100
  location in text, 109
  number of, 86–7
  predefined or interactive choice of, 83
  relationships between, 91–102, 94–7, 107–8
  types, 92, 93–4
conceptual dependency based scripts, 88
conceptual structures, 78

concordances, 77, 87
  analysis, 108–11
  definition, 108
conditional discrete-time models, 231, 239
conditional independence hypothesis, 12–16
conditional likelihood (event-history analysis), 228–35
  partial likelihood, 234–5, 239, 241
  piece-wise exponential model, 235, 238
conditional probabilities, estimation of, 66
confidence intervals, 64
confirmatory factor analysis, 149
confirmatory tetrad analysis (CTA), 147, 171–3. *See also* vanishing tetrads
  examples, 164–71
  significance testing of vanishing tetrads, 160–71
  usefulness of, 149–50
conjugal residential relationship, 250–70
construction of meaning, 78
containment structures, 135, 138
content analysis (texts), 76, 77, 79–91, 103–4, 115
  advantages/limitations of, 87–91
  automated or semi-automated, 81, 82, 83, 87, 89, 115, 117–19
  coding choices, 81–7
  concordance analysis and, 109
  contextual, 89–91
  linguistic, 106
  map analysis subsumes, 80, 93, 102
contextual social effects, 30, 31–2, 33, 36, 67
contingency tables
  correlation models, 187–9
  departures from independence in, 178
  notation and data arrays, 185–7
  relationship of rows and columns, 178
continuous time models, 283–9
continuous-time piece-wise exponential models, 230–2
conventional likelihood piece-wise exponential model, 236–8
conversational analysis, 76
corporate donations to not-for-profit agencies, 179
correlated individual effects, 30, 31–2, 33, 34
correlation models (ordinal relations). *See also* canonical correlation analysis
  compared to association models, 208–10
  description of, 178–80, 187–9
  restricted, 194–201
correlations
  asymptotically distribution-free tests for, 149
  test statistic, 149
  tetrad differences of, 162
correspondence analysis, 178, 187–9, 211–13
  fraternity interactions example, 190–3
  response pattern matrix, 211
  restricted, 194
covariance algebra, 152, 165
covariance matrix, 152, 156, 162, 165
  asymptotic, 160
  of observed variables, 148
covariances
  asymptotically distribution-free tests for, 149
  nonlinear functions of, 161
  test statistic, 149, 151–2
  tetrad differences of, 162
  zero covariance of covariate effects across time, 291
criminals, attitudes toward treatment of, 179
cross-classification of variables, 201, 211
cross-destination stochastic correlation, 248
CTA. *See* confirmatory tetrad analysis (CTA)
cubic model of employment effects, 306–7
cultural interpretations of data, 81
cultural truth, 79

data, availability of, 2, 71
data arrays, 185–7, 210
decision theory, 41n, 44, 45
